MAKER CHECKER APPROVER SYSTEM

HNTI Limited

BOM v1.0

Problem Statement

HNTI team is facing challenges in managing internal approvals for supplier price increases or decreases. The process needs to follow a structured Maker–Checker–Approver workflow, where the request is initiated by the Maker, validated by the Checker, and processed through multiple levels of Approvers. The system should support query handling at any stage, allow seamless communication between levels, and ensure proper tracking of approval status. Upon final approval, the system must automatically generate a PDF document and trigger email notifications to the relevant stakeholders.

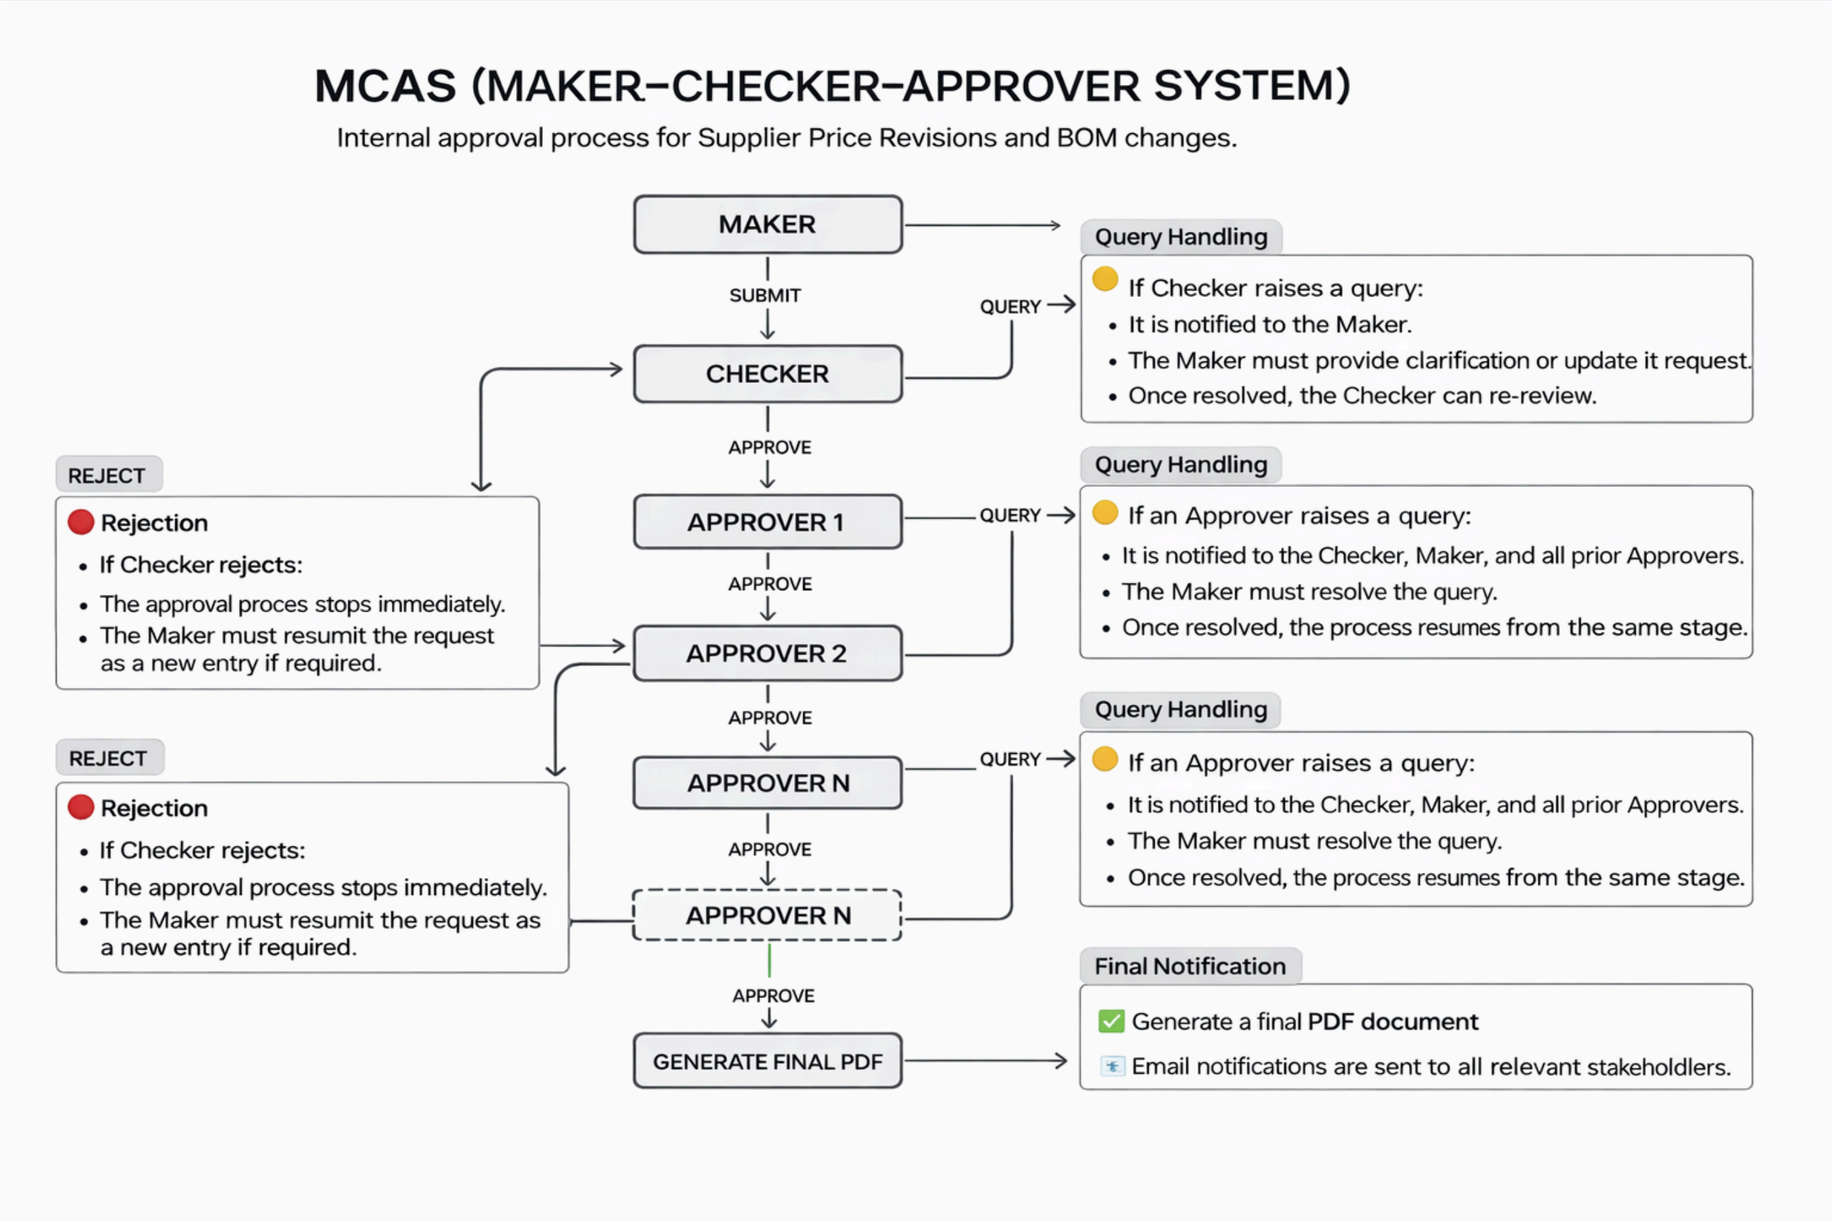
Proposed Solution

We propose a web-based application named MCAS (Maker–Checker–Approver System) to digitally streamline and automate the internal approval process for supplier price revisions (increase or decrease) and BOM changes.

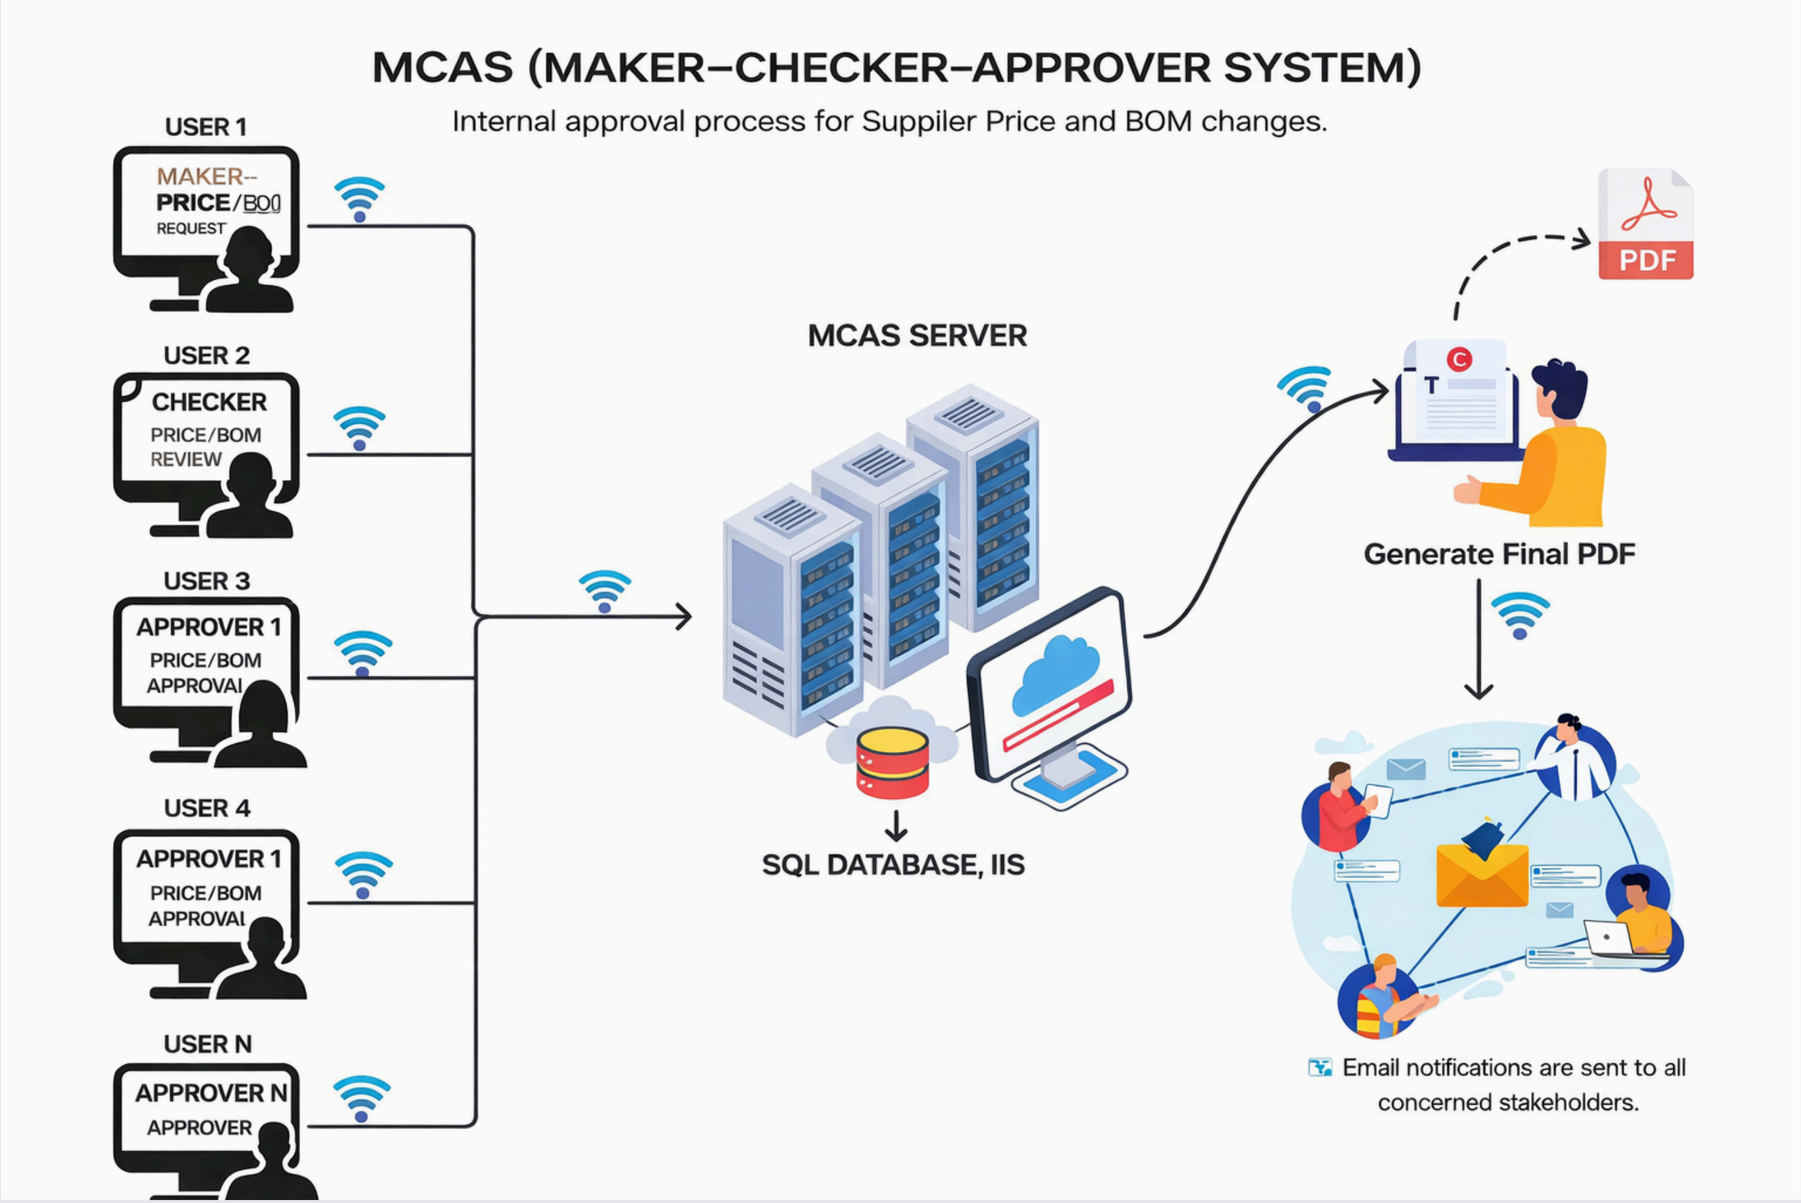
Key Features of MCAS:

- Web-based, role-based secure login (Maker, Checker, Approver)
- Structured multi-level approval workflow (Maker → Checker → Multiple Approvers)
- Separate processing flow for Price and BOM submissions
- Open query handling with ability to raise and resolve queries at any stage
- Bulk upload option for adding parts and data
- Support for component master and additional fields like Supplier Code, Extra UOM, etc.
- Auto-generation of PDF approval summary upon final approval
- Automatic email notifications to all relevant stakeholders at each stage

Process Flow



Solution Illustration



Benefits

- Eliminates manual follow-ups and approval delays
- Reduces dependency on manual coordination by enabling a structured Maker–Checker–Approver workflow.
- Streamlines the approval process
- Ensures smooth flow from Maker → Checker → multiple Approvers without relying on email threads or paper-based approvals.
- Ensures process transparency & accountability
- Tracks every action across stages—who created, verified, approved, or raised queries—improving ownership and visibility.
- Tamper-proof digital approval records
- Final approvals are securely stored as non-editable PDFs, ensuring data integrity and compliance.
- Time-saving for all stakeholders
- Faster validation and approvals reduce overall cycle time and improve operational efficiency.
- Centralized repository for all approvals
- Provides easy access to historical Price and BOM approvals for audit, analysis, and decision-making.
